

## Questionnaire

### A. Respondents details

a) Country: *Philippines*

b) Your name:

c) What organisation/institution are you coming from:

Governmental Agency  LGU  Private Corporation  Academic Institution  PO/NGO

Position in the organisation/institution:

Involvement in SWM issues    planning     consulting     other

Years in the organisation/institution:

Contact address:

phone:

email or fax:

### B. Community data

1. How would you characterize the gross income situation in your community ?

Below general average  Medium income/average  Above average

remarks:

2. To what extent is unemployment/poverty a problem in your community ?

small problem  medium scale problem  high problem

remarks:

3. How would you characterize the dwelling situation in your community ?

low density  medium density  high density

remarks:

**C. Waste management related details**

1. Do the community members currently pay for waste services (e.g. collection) ?

Yes  No

2. If yes, how much?

1 Piso  More than 1 Piso  How much:

remarks:

**D. Your perceptions regarding future waste management**

1. Do you think the community members would be willing to pay some contribution (e.g. a certain charge) for a better waste management in the community ?

Yes  No

2. If yes, what do you think would be the maximum acceptable amount per household?

Comments:

3. How important is leadership in the uptake of advanced solid waste management technologies?

Essential  Important  Good if present but not critically necessary

Comments:

4. Would you trust the adoption of advanced waste management technologies such as used in European countries to improve solid waste management in your country ?

Yes  No

Comments:

5. Would you think that examples of applications of such technologies/experience with them in other Asian countries would be helping their adoption in your country ?

Yes  No

Comments:

5. Would you think the segregation of waste at source into very specific fractions be a feasible option in your community ?

Yes  No

6. If yes, what do you think could be the most suitable fractions ?

biodegradable organics  mixed recyclables  plastics  paper  other residuals

remarks:

6. If you reflect on the following technological options, what do you think would be the situation in your community with regard to the following items ?

*Please use a grading from 1 for "very low" to 5 for "very high" to answer for each option*

	Centralized (larger scale) composting	Organic digester	MRF	Sanitary landfill
a) General acceptance				
b) NIMBY syndrom ("not in my backyard")				
c) Perception as of not being appropriate				
d) Perception as of being too expensive in comparison to alternative solutions				
e) Chance to avail of alternatives				
f) Problem in finding the appropriate areas				
g) Fears with regard to possible nuisances/dangers				
h) Trust in the technology				
i) Perception as to the usefulness of these options -to help improve waste mgt. -to provide useful outputs				
Please state what you think could be the main advantages and disadvantages of each option				
Advantages				
Disadvantages				

**Thank you for your help. SALAMAT PO !**
